

**Learning Objective:**

Describe the process of germination in seeds and bulbs.

Lesson 1

I think:

My teacher thinks:

Draw how your chosen seed germinates over the four days. You can add labels to show any important things you notice.

**day 1**

it's amazing when it grew shoots.

These are shoots

The seeds have cracked open and let their small case grow shoots.

Day 1 the seeds have grew little shoots because it is germinating

germinating

**day 2**

it's more amazing than day 1.

The shoots have grew bigger!

Day 2 The shoots have grew even more bigger because it's germinating

Shoots

Sprouted a tiny plant

The shoots have been even more bigger and it's turning into plant which are sprouting

almost forming bulb

**day 3**

more bigger

Day 3 Day 3 is just amazing

The shoots are really big today it's amazing.

The shoots are germinating have grew even more bigger

The shoots have grew even more longer

**day 4**

Day 4 Now the plant is a actual plant.

Before, the leaf was yellow but day 4 the leaf is green!

The leaf are now green!

Describe how the seed changes over the four days

Day 1 The seeds have cracked open and let their small case grow shoots. Day 2 The shoots have been even more bigger and it's turning into plant which is germinating. Day 3 the shoots grew longer. Day 4 the leaf were before yellow but now they are green.

Also there was transpiration inside the bag.
